

CARE AND MAINTENANCE

STACKED WOOD – WOOD WALL PANELS

CLEANING

Dust, dirt and debris love to hide in the nooks and crannies of real wood paneling. While you can dust the wood to remove surface dirt, to clean wood paneling effectively, you must use a vacuum. Add the soft brush attachment to the wand of your vacuum and work methodically across the wall, starting at the top and working down.

*If a piece does become detached from the wall reposition with 100% polyurethane glue.

REVIVING THE APPEARANCE

In case of an oiled product, natural oil can be applied every few years to enhance the wood tones.
