

# STACKED WOOD

## 24" x 24" DROP IN CEILING TILE

### DROP IN CEILING TILE / DESIGNED TO FIT A 9/16" OR 15/16" GRID SYSTEM

Drop in ceiling tile designed to fit a 9/16" or 15/16" grid system.

For best results, use a black grid system or paint the existing one in black.

For safety and best results, make sure it's done by a professional in order to respect the weight capacity of the grid system with our tiles.

YOU ARE NOW READY TO INSTALL your ceiling tiles

- Slide the tile through the grid opening at an angle and carefully slide in place.

### BORDER TILE AND INSERTS

You may have less than full size tiles around the perimeter of your room or tiles that will necessitate cuts for light fixtures or the like. We designed a tile with no relief that won't lose its structure when cut.

SOUND ABSORPTION: for better sound absorption, install mineral wool on the ceiling.

\*Black felt can be installed behind the ceiling tile for better sound absorption and hide the ceiling through the relief.

SPRINKLERS: If your ceiling is equipped with sprinklers, it is important to be compliant with the building code and other laws applicable to your region. Contact the project planner/fire safety departments.
